Dear hiring team,

I am applying for the Product Designer role. I am a product designer who ships in code, not only in Figma, and I have spent the last several years on AI and SaaS products at startup pace, alongside Fortune 500 work (Audi, Samsung, 3M, Ford, Sony+Honda, Costco).

I am looking for an IC seat on a product team where I can go deep on one product with strong PM and engineering partners. I do my best work on complex B2B and workflow tools where clarity, trust, and speed all matter, especially when AI is part of the daily experience.

Recent work I am proud of includes Frameline (<https://frameline.ai>), an AI product workspace I designed and shipped largely solo, including production UI in React/Next.js. I use Cursor and Claude every day to move from research and flows to working software faster, while keeping a high bar on interaction, states, and visual craft.

I would bring end-to-end ownership: problem framing, prototyping, polished UI, and close partnership through launch and iteration. I am based in Brazil (UTC-3), open to relocation, and would need visa sponsorship for US-based roles.

Thank you for your time. Portfolio and case studies: <https://paulo.dudesign.us>

Best,

Paulo Freitas

Uso: troque a primeira linha por "Dear [Company] team," se quiser. O resto serve para qualquer candidatura Product Designer / AI SaaS.
